

2010 Spring Release Notes

Enclosed is your CD to update Instant Medical History. Please install by clicking "IMHSetup.exe" on the CD, and following the prompts to upgrade your program. Your preferences and settings will not be changed. We will briefly describe new features in the following sections, and invite you to web training to learn more.

New Questionnaires

New Content Releases

The Musculoskeletal and Cardiovascular condition lists have been expanded. Also, new questionnaires are available for:

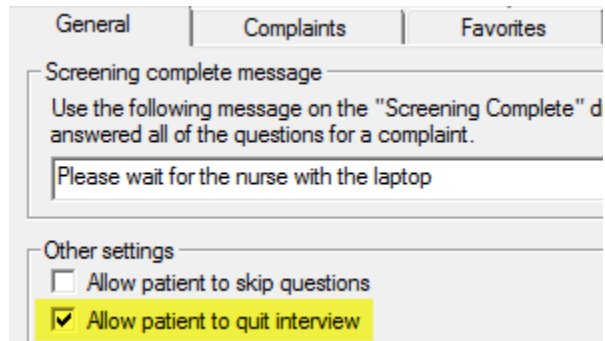

- Pre-Surgical Exams
- Adolescent Sports Physical Exams
- Geriatric Exams
- Migraine Headache Follow-up
- Depression Follow-up
- Antenatal History
- New Cancer Patient
- Injury

as well as a more complete list of complaints for online consultations and eVisits.

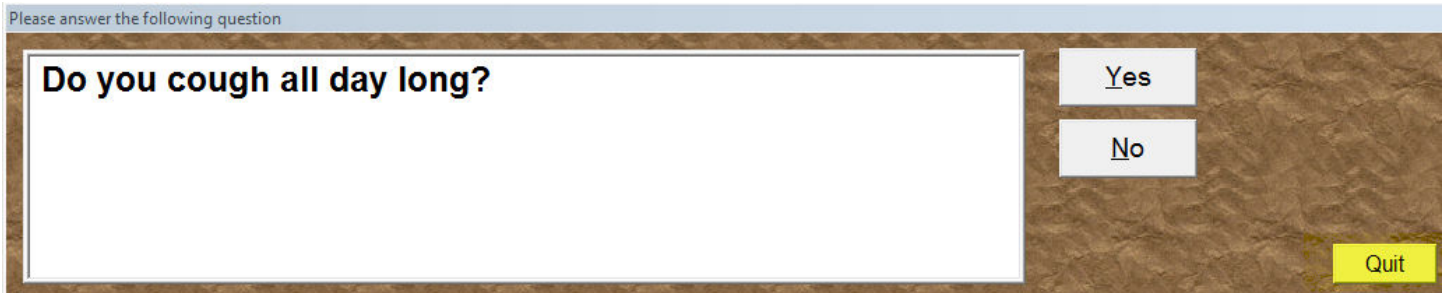

New Feature

Ability to Quit a Questionnaire

A new feature has been added to allow a patient to quit a questionnaire. This can be useful for times when the patient needs to go into an exam room, the physician has entered the exam room, or the patient is simply ready to finish. When you quit the interview, all questions up to that point will be summarized in the IMH report. To enable this new feature, please go to Tools, Options, General, and then check off the “Allow patient to quit interview” option as shown in Figure 1.

Starting with the next questionnaire, the option to quit will be available!

Free Training

We are scheduling web tutorials to introduce these new options and discuss patient scheduling and physician workflow. A full schedule is at

<http://www.medicalhistory.com/usertools/trainingclasses.asp>

Please telephone us at 803-796-7980 or send an e-mail to support@medicalhistory.com if we can be of assistance to you. We appreciate your comments and feedback as an important source of improving Instant Medical History, and thank you in advance for suggestions.
